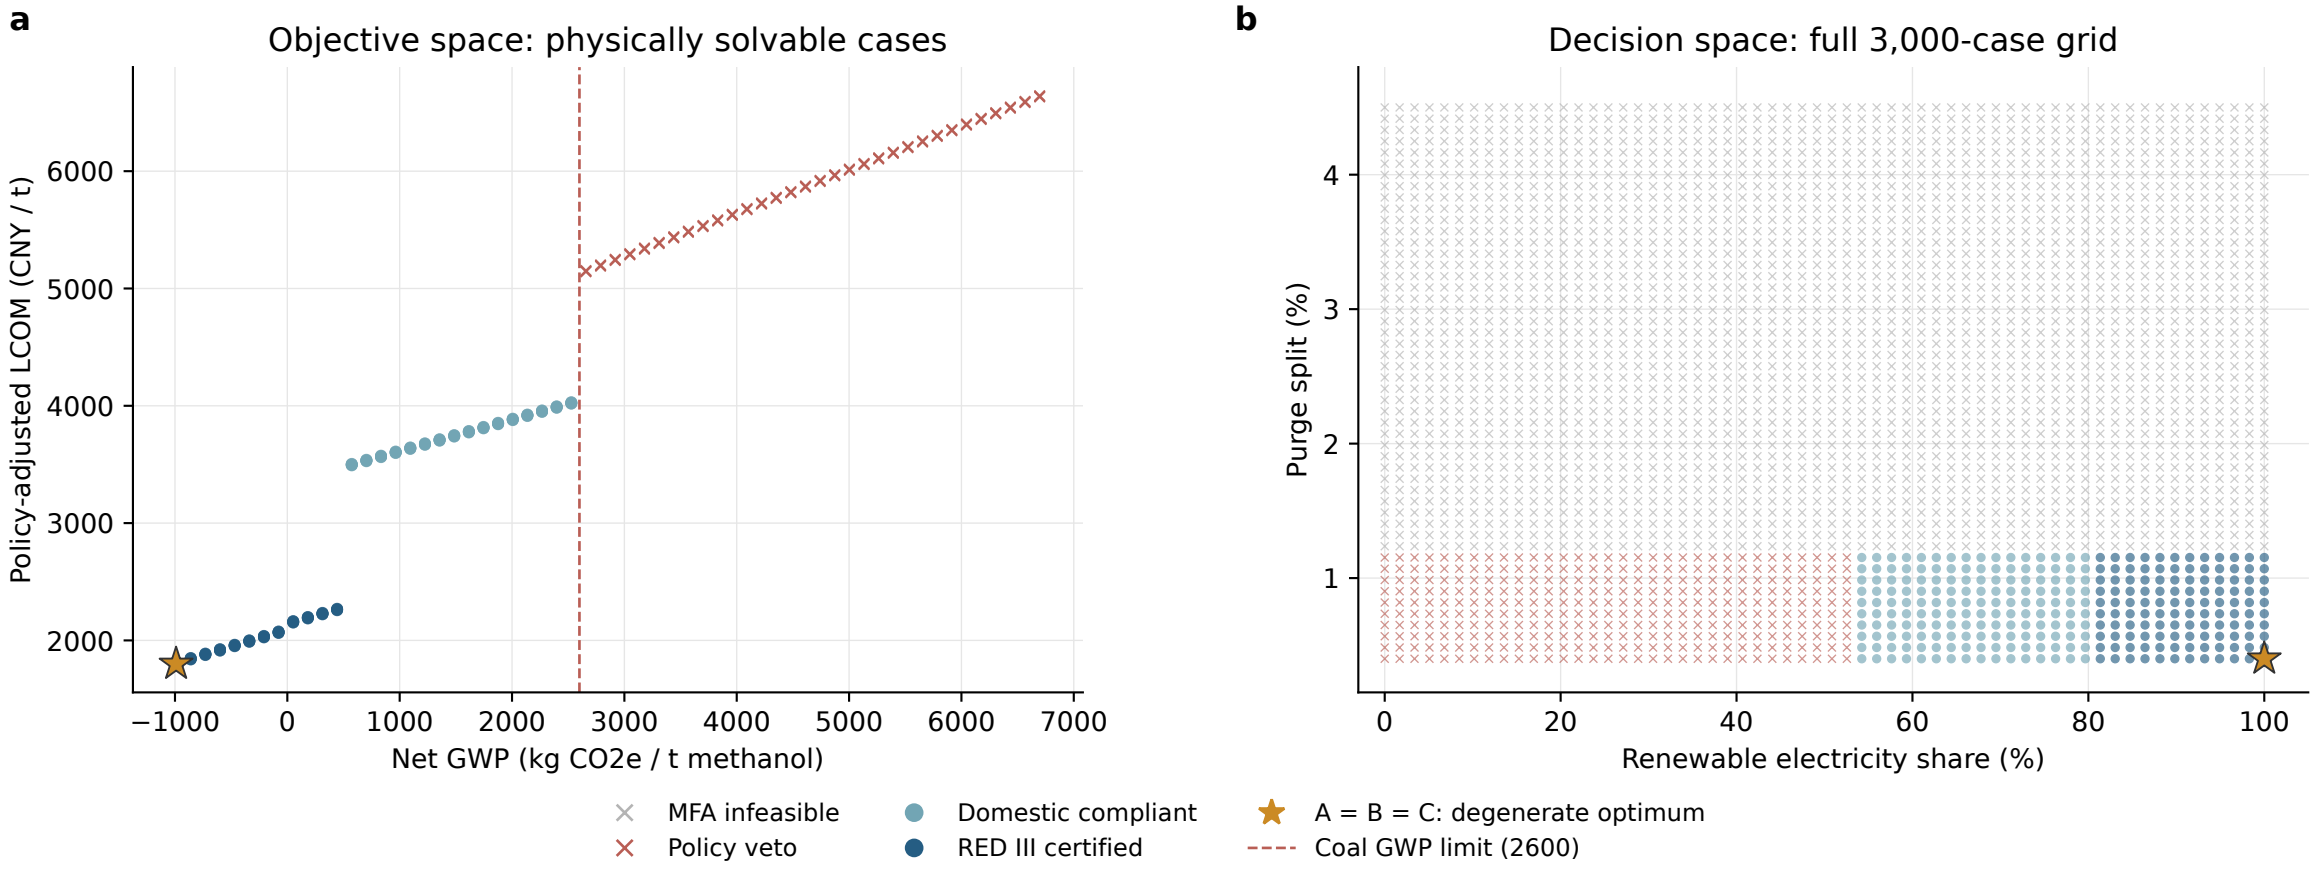
Green methanol planning: source-constrained Pareto screening

A = B = C: degenerate optimum | 1 nondominated grid case(s)



Grid: 60 renewable shares x 50 purge splits; 2400 MFA-infeasible cases excluded from objective space.
Scope: fixed source energy / non-electric quotas; PV 0.20 CNY/kWh, coal 0.32 CNY/kWh. No fitted storage-cost curve.
